

	<b>Quality Management Manual</b>  <b>Chapter 2</b> <b>Quality policy / Environment policy</b>	<b>QMH</b>
---	--	------------

The quality of our products and the protection of our environment are of the utmost importance for the sustainable development of our company and the safety of our jobs.

Only through the cooperation of all employees can we achieve optimal quality, environmentally friendly production, flexibility and the reduction of costs and environmental impact. The behavior of management and all employees must be characterized by a constant striving for improvement.

Our actions are in the well-being and interest of our company and the protection of our environment. For this reason, customer satisfaction and environmental responsibility are our top priority.

Customer satisfaction and the minimization of our environmental impact are the benchmarks for our goal of continuously improving the quality of our products and the environmental friendliness of our processes.

In order to meet these requirements, our main goal is to avoid errors of all kinds and to reduce environmental impact, in particular by minimizing waste and emissions.

The documentation of our integrated management system in accordance with DIN EN ISO 9001 and DIN EN ISO 14001 is intended to identify possible errors and environmental risks at an early stage in all departments of Bauer Thermoforming and to prevent the repetition of errors and negative environmental impacts through appropriate corrective and preventive measures. A quality and environmental management officer are employed to maintain and implement quality and environmental management.

Every employee contributes to the quality of our products and to protecting the environment through their work and responsible actions. Optimally executed, environmentally conscious work forms the basis for quality, reduces our costs and environmental impact and thus increases the profitability and competitiveness of our company.

The prerequisites for achieving these goals are the ongoing training and continuous further education of all employees, both in terms of quality awareness and in sustainable, environmentally friendly actions.
